

Software Developer- Entry level

Location: Blue Bell, PA

Department: Software Development

Type: Full Time, Permanent

Min. Experience: Entry Level

We are looking for talented PHP developers who are motivated, enjoy a challenging and fast paced environment, and have a passion for top-notch software development. The ideal candidates will work as software developers on expanding and enhancing our CoreDial software platform, adding new features and capabilities, as well as fixing bugs and testing. Candidates will be involved in the full software development lifecycle (Agile / Scrum), from gathering business requirements and writing specifications, to coding, testing, and deploying to lab/staging environments. Our developers are not just coders. Our developers are innovative and they strategize to deliver solutions. This is an exciting and challenging environment where you will learn new things on a daily basis.

Duties and Responsibilities

- Perform software design, development and unit testing as part of CoreDial's software development team
- Develop, test, and maintain distributed and scalable web-based applications coded in PHP & MySQL
- Participate in writing and maintaining requirements and specifications documents
- Implement major new features and feature improvements
- Track and eliminate bugs or defects
- Optimize code and queries for better performance
- Assist with integration and usability testing
- Daily contact and communication with Project Manager to report progress, identify issues, and define next steps

Qualifications

- Top-notch computer programming skills with 2 to 5 years of software development experience
- Must have a strong working knowledge of application architecture, design patterns, and development methodologies/frameworks
- Knowledge of PHP and MySQL (LAMP stack)
- Experience with Linux or other unix-based operating systems a must
- Ability to work independently, meet deadlines and achieve goals with minimal supervision

A plus,

- Familiarity with HTML, CSS, Javascript, jQuery, AJAX, JSON, and other dynamic web technologies
- Basic knowledge of Perl, XML, shell scripting, C/C++
- Experience with design patterns and MVC frameworks
- Experience with Asterisk, VOIP, or SIP are a plus
- Experience and understanding of CVS or other version control systems a must

About CoreDial

CoreDial is a leading cloud software and services/platform enabling companies to quickly, and cost effectively, provide high quality, private labeled hosted PBX, VoIP and SIP trunking services. With no hardware or software to buy, our Interconnect, Managed Service Provider, and Carrier customers are able to sell, provision, manage and invoice for valuable end-user hosted products and services, while creating margin rich recurring revenues and building value in their brand. The CoreDial cloud software platform streamlines business processes, offers limitless scalability and extensibility, and is the engine behind many of the leading Service Providers throughout the United States. CoreDial is located just outside of Philadelphia in Blue Bell, PA. For more information, visit <http://www.coredial.com>.

Benefits

The Company provides a competitive salary of 50k and benefits package which offers Medical and Dental Insurance, a Pension Plan, Paid Time Off, Paid Holidays, and additional benefits. CoreDial is a fun and challenging place to work, and we are focused on creating great opportunities for our employees, their families, our customers, as well as the communities we serve.

We are an Equal Opportunity Employer.
